

## ***High School Technical Theatre Interview Questions for CCSA '17-'18***

1. Please explain your Scenic Design Element.
2. Please explain your Costume Design Element.
3. Please explain your Props/Properties Design Element.
4. Why do you want to be a Technical Theatre Major at CCSA?
5. What area of Technical Theatre interests you the most? Why?
6. What (if any) is your experience with Technical Theatre (lights, sound, costumes, etc.)?

These are the pieces of information that I am looking for out of each area (ask these questions if they don't talk about them...):

### **Scenic Design:**

Explain why you designed the show like you did? How would you make it so that Gary would not hurt himself when he falls down the stairs? How would you build the set so that it can turn around 180 degrees easily? What if you had to design this set and you could not have a full second floor, how would your set design change? What would you do in order to make the audience believe it is still two floors?

### **Costume Design:**

Why did you make the choices you did? How would you go about making sure Brooke was not uncomfortable, or inappropriately exposed in her lingerie? What would you do if Selsdon's costume got ruined 5 minutes before the show started?

### **Prop Design:**

Where might you be able to get the props for this show? How many separate plates of sardines would you prepare, "Just in case..."? In the Act 2, the stage is flipped around, how would you solve a problem with props now that backstage can now be seen?
